
DEVELOPER TASK

Create a web application based upon persistent storage (perhaps a database).

Minimum requirements - The application should allow a person to:

1. register
2. authenticate herself
3. Access a view where a list of timestamps for the user's last 5 successful login attempts is shown. Only authorized persons should be able to access this view.

Prerequisites:

- You choose platform and language
- You will walk us through your solution when we meet
- We should be able to test your solution when we meet
